MECHANICAL SYSTEMS

GENERAL

Continuous maintenance is essential for the proper operation of mechanical equipment. Without proper preventative maintenance, the equipment usually fails when it is working the hardest and most needed. Mechanical system preventative maintenance is best handled by professionals skilled and specially trained in the operation and maintenance of heating, ventilating, and air-conditioning equipment.

This section includes general information and procedures essential to preventative maintenance of mechanical equipment. It is designed to be used as a monitoring tool. It is suggested that this technician review the operation and maintenance instructions provided by the manufacturer for each piece of equipment and add any pertinent items to the mechanical check lists which follow.

General preventative maintenance contracts should include the following:

- Water heaters, burners, valves, gauges, motors, pumps, compressors, exhaust fans, steam traps, ignition components, filters and safety devices
- Operation of the equipment
- Parts inventory
- Corrosion prevention for pipe connections, especially for steam pipe connections
- Calibration of temperature controls
- Fuel efficiency tests
- Air conditioning ventilation balancing
- Corrosion free electrical connection

MECHANICAL SYSTEMS CHECK LIST

BUILDING:]					DATE:
				-	-	_	
		W	Μ	Q	S	Α	COMMENTS
	Clean hot water heater and piping internally. Swab tubes with neutral oil as directed by the manufacturer's operating instructions.						
	· · · · ·						
	Clean water side of steam. Use pressurized water jet and scrapers to remove any scale as directed by the manufacturer's operating instructions.						
	Fill tubes with water as required or annually.					Х	
	Clean control box of all dust as required or annually.					х	
		r —	r –	1	1	1	
	Check operation of combustion air louvers which supply air to room.						
		r —	r —	1	1	1	
	Test water quality for pH, hardness, and corrosive compounds. Chemically treat as required or monthly.		х				
		-	-				
	Clean strainers as required or annually.					Х	
	Test low water cutoff annually.					Х	
			r –		r		
	Check high steam pressure limit control.					Х	
	Check low water level limit control.					Х	
	Check pressure relief valve.					Х
